HW 12

→ Race condition diagram:-

Editor thread   File   AutoSaves thread

change()   changed
changed = true   == false

save()
changed == false

                   save()
                   changed == false
                   return

change()
changed == true

                   save()
                   changed == false

save()
changed == false
return

At this point Editor thread save() will be called. but here AutoSave thread save() is called.

Race condition I am here.
